

OPERATIONS AUTOMATION CASE STUDY

Automated Order Processing and Delivery Operations System

Website, admin dashboard, driver view, and Make.com automation

Valerie Tesorero
Executive Operations and Automation Specialist

- READDY.AI
- MAKE.COM
- SUPABASE
- GOOGLE SHEETS
- GMAIL
- STRIPE

Business Challenge and Project Objective

FRAGMENTED MANUAL PROCESS

- Orders enter through the website, chatbot, or phone with no shared entry point
- Staff need one place to confirm and manage every order
- Customers need timely order, payment, cancellation, and delivery updates
- Drivers need clear delivery and payment information
- Management needs visibility into sales, order status, and menu availability
- Manual updates can create delays, duplicate work, and inconsistent communication

CONNECTED ORDER MANAGEMENT SYSTEM

One connected system captures orders, routes each event to the correct action, updates operational records, and sends the appropriate notification.

- A single dashboard for every order, regardless of channel
- Automated routing of notifications, records, and payment actions
- Real-time status shared across admin, driver, and customer

Connected System Architecture

Supabase captures the order event, while Make.com routes the event to the correct record, notification, and payment action.

Order Processing Workflow

- 01

New Order
Logs the order and sends an internal notification.
- 02

Order Delivered
Sends the customer a delivery confirmation, generated invoice, and review button. Admin receives a BCC copy for visibility.
- 03

Order Cancelled
Updates the order status and sends the appropriate cancellation notification.
- 04

Online Payment
Handles online orders from the website or chatbot, with a 24-hour payment window when checkout remains incomplete.
- 05

Send Payment Link
Sends a secure Stripe payment link for call-in orders, with a 24-hour payment window.

Admin Control and Reporting

- View and confirm incoming orders
- Monitor fulfillment status in real time
- Manage menu availability
- Update operating hours

Admin access requires Google authentication through the company's business email domain.

- Filter and search order records
- Track order value and payment status
- Export sales reports
- Download invoices individually or in bulk

Driver and Customer Experience

DRIVER EXPERIENCE

- View assigned and completed orders
- Review delivery information
- Confirm delivery
- Proceed directly for prepaid orders

- Navigate to the customer's address
- Update order progress
- Record payment or tip for cash-on-delivery
- Support Stripe card reader payments

CUSTOMER COMMUNICATION

- New order confirmation
- Secure payment link
- Payment confirmation

- Cancellation notification
- Delivery confirmation and invoice
- Review request button

Operational Value and Skills Demonstrated

OPERATIONAL VALUE

Centralized order visibility

Fewer repetitive administrative steps

Consistent customer notifications

Clearer delivery and payment tracking

Easier sales and invoice reporting

Faster menu and business-hours updates

SKILLS DEMONSTRATED

Workflow and process design

Make.com automation and Supabase event handling

Google Sheets, Gmail, and Stripe integration

Dashboard planning and development

Operational reporting and customer communication design

AI-assisted development using Readdy.ai and Claude

FUTURE IMPROVEMENTS

Automated exception and failure alerts

More advanced operational analytics

Role-based permissions

Inventory-level automation and driver performance reporting

Customer order-status tracking

Stronger automation logging and error handling

I designed this system to connect customer orders, internal operations, payments, and delivery updates within one coordinated workflow.
